PROJECTS

SYMPOSIUM

Apr. 2019 to May 2019

- Was a key player in the creation of the admin page on an Open Source chat forum project soon to replace the schools existing chat medium
- Took on the challenge of redesigning the entire website for easier user navigation and better user experience according to specifications provided with InVision Prototype
- Assembled the User Management frontend using React and Redux
- Upgraded existing Express.js & Postgres backend with an additional database table and API endpoints for approving and denying emails
- Collaborated daily with 2 remote Team members and our Team Lead

PROJECT COURSE CORRECT

Mar. 2019

- Performed as sole Backend Developer in the development of a job site for soon to be and recently released convicts entering the workforce
- Utilized an Express.js and SQLite3 to structure the backend API endpoints and database that are accessed by the frontend to display and update information
- Collaborated with 4 remote team members daily to ensure successful project execution in 1 week
- Assembled Application testing using Jest
